AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings of claims in the application:

LISTING OF CLAIMS:

- 1.-15. (CANCELLED)
- 16. (NEW) Tile mounting system, comprising at least one substantially flat grid element comprising a number of mutually intersecting walls which bound tile compartments lying therebetween, characterized in that the grid element is at least substantially form-retaining and that the walls are adapted to receive a tile fitting in a tile compartment therebetween.
- 17. (NEW) Mounting system as claimed in claim 16, characterized in that the walls are provided on their side directed toward a tile compartment with a moisture seal for receiving a tile thereagainst.
- 18. (NEW) Mounting system as claimed in claim 17, characterized in that the moisture seal comprises a flexible strip extending in the tile compartment.
- 19. (NEW) Mounting system as claimed in claim 16, characterized in that the grid element, for the purpose of receiving a tile thereon, extends partially along the walls within the compartments.

- 20. (NEW) Mounting system as claimed in claim 16, characterized in that the grid element is provided along the walls within the compartments with a glue bead for receiving a tile thereon.
- 21. (NEW) Mounting system as claimed in claim 20, characterized in that the glue bead also at least partially forms a moisture seal to the walls of the grid element which bound the compartment.
- 22. (NEW) Mounting system as claimed in claim 16, characterized in that the grid element extends partially within the compartments and is provided with fastening provisions for fixing the grid element to a surface for tiling.
- 23. (NEW) Mounting system as claimed in claim 22, characterized in that the fastening provisions comprise continuous bores for receiving an anchoring element therein.
- 24. (NEW) Mounting system as claimed in claim 22, characterized in that the fastening provisions comprise gutters which are arranged in the walls and which open on a rear side of the grid element and are adapted to receive an adhesive therein.
- 25. (NEW) Mounting system as claimed in claim 22, characterized in that the fastening provisions comprise a

self-adhesive layer arranged on a rear side of the grid element.

- 26. (NEW) Mounting system as claimed in claim 16, characterized in that the grid element is provided on a periphery with coupling members which are able to co-act with coupling members of a further grid element to form a substantially form-retaining mutual connection.
- 27. (NEW) Mounting system as claimed in claim 26, characterized in that the coupling members comprise a snap member on a first grid element and a complementary snap cavity on the further grid element which extend from outer ends of walls of the two grid elements directed toward each other.
- 28. (NEW) Mounting system as claimed in claim 26 characterized in that the coupling members comprise a groove on a first grid element and a complementary rib on the further grid element which extend from walls of the two grid elements directed toward each other.
- 29. (NEW) Method for tiling a surface, characterized in that a mounting system as claimed in claim 16 is fixed to the surface and that tiles are then placed in compartments provided for this purpose in a grid element of the mounting system.
- 30. (NEW) Method as claimed in claim 29, characterized in that the tiles in the compartments are fastened to the grid element.
